categorizing Vote_Average column We would cut the Vote_Average values and make 4 categories: popular average below_avg not_popular to describe it more using catigorize_col() function provided above.

```
In [37]: # define labels for edges
labels = ['not_popular', 'below_avg', 'average', 'popular']
# categorize column based on labels and edges
catigorize_col(df, 'Vote_Average', labels)
# confirming changes
df['Vote_Average'].unique()
```

```
Categories (4, object): ['not popular' < 'below avg' < 'average' < 'popular']
